The cruise and ferry terminals will be electrified in the near future

Located on the Bay of Biscay, the ferry terminal and the two cruise terminals provide an ideal gateway to develop tourism in the region.

Besides, The Port Authority has decided to equip its container, Ro-Ro and cruise terminals with facilities to supply electricity to ships while they are berthed, with a view to reducing vibration and noise levels and cutting greenhouse gas emissions by 40%.

This will enable the Atlantic Arc to take a considerable step forward in its efforts to deliver the EU “Fit for 55” targets.

The project also provides for facilities for renewable power generation, including solar photovoltaic, wave and win power.

Bilbao, a re-invented town for the future.

Bilbao, the capital of Biscay, is a city that has been “re-invented” where the past and the future, tradition and innovation co-exist to create a harmonious landscape that is reflected in its parks and gardens, promenades, streets and buildings.

Internationally renowned for its urban transformation, Bilbao received the city Nobel Lee Kuan Yew World City Prize in 2010.

Several Pritzker Prize-winning architects have contributed to turning this historically industrial city into an attractive and cultural destination. The Guggenheim Museum Bilbao, designed by Frank Gehry; the Isozaki Atea towers, by Arata Isozaki; the Deusto Library, by Rafael Moneo; the Bizkaia Aretoa auditorium, by Álvaro Siza; the Bilbao metro, by Norman Foster; the Zorrotzaurre General Plan, by Zaha Hadid; Anbotu Dorrea, by Richard Rogers, and many other such architectural works can all be taken in and admired on a stroll around the city.

Bilbao is the capital city of Biscay as well as a metropolis, and the economic and financial centre of Euskadi. It is the largest urban area in Euskadi (1,000,000 inhabitants) and a university town.
